

Job Title: Cae'r Glaw Quarry

Photoview No. 4

| CLASSIFICATION<br>OF RECEPTOR | COMPONENTS OF<br>EXISTING VIEW | COMPONENTS OF PROPOSED VIEW |                       | LOCATION OF PHOTOVIEW |
|-------------------------------|--------------------------------|-----------------------------|-----------------------|-----------------------|
|                               |                                | DURING OPERATIONAL LIFE     | FOLLOWING RESTORATION |                       |

|  |   |   |  |  |  |   |   |   |
|--|---|---|--|--|--|---|---|---|
| <p>Angle of View: 90°</p> <p>View looking west from unclassified road to the east of the site south of Bryn Ala</p> <p>Classification of Receptor: Highway</p> <p>Distance from Quarry boundary: 500m</p> <p>Elevation: 50m AOD</p> <p>Sensitivity: High</p> | <p><u>Foreground</u></p> <p>Open pasture with sparse tree lined hedgerow banks</p> <p><u>Middle Distance</u></p> <p>Strong vegetation cover, mix of scrub woodland and isolated boundary trees. Some elements of the existing quarry are visible through the vegetation, primarily the southern parts of the working void.</p> <p><u>Far Distance</u></p> <p>The horizon is dominated by higher terrain of north west Anglesey and the Holyhead Mountain in the very far distance</p> | <p><b>DESCRIPTION OF VIEW</b></p> <p>The proposed extension lies within the mid ground. The phased nature of the extension will bring the working nearer to this vantage point, but will be incremental in nature. There is potential for soil stripping activities to be visible from this location with earth moving vehicles potentially visible. The upper face in the SW corner of the extension may also be visible. However, once this face is complete, it is proposed that the upmost edge of the face would be subject to a small restoration blast to soften the edge and green up as soon as possible. These views will, therefore, be short term and as soon as extraction is below current ground levels, quarrying activities will not be visible.</p> | <p>The progressive restoration of the eastern faces of the quarry will not be visible from this location. The rocky outcrop to the east of the quarry will be retained. At the cessation of quarrying, the southern faces will, to a large extent, have naturally regenerated.</p> |  |  |   |   |   |
|  |   |   | <p><b>MAGNITUDE OF IMPACT</b></p>  | <p><b>EXISTING QUARRY</b></p> <p>Low</p> |  | <p><b>EXTENSION</b></p> <p>Medium (during soil stripping)</p> | <p><b>EXISTING QUARRY</b></p> <p>Negligible</p> | <p><b>EXTENSION</b></p> <p>Negligible</p>       |
|  |   |   |  | <p><b>SIGNIFICANCE OF IMPACT</b></p>     |  | <p><b>EXISTING QUARRY</b></p> <p>Moderate Adverse</p>         | <p><b>EXTENSION</b></p> <p>Slight Adverse</p>   | <p><b>EXISTING QUARRY</b></p> <p>Negligible</p> |
